
Executive Summary

As trusted advisors to One Communications, Element K, CSEA and Badger Technologies, Infotegrity collaborates with executives, staff and auditors to deliver solutions that enhance compliance, performance and continuity. Results of our efforts driving business excellence, cost savings and ROI to new levels are exemplary. Infotegrity's expanded offerings advance strategic *top and bottom-line* directed initiatives in the following areas:

Compliance

Financial & Technology
Security, License & Support

Performance

Business Intelligence, Consolidation, Datawarehouse & Reporting
Capacity, Instance Management & Back Up/Recovery
Integrated Supply Chain

Continuity

Disaster Recovery & Business Continuity

Benefits of Infotegrity's services:

- Up to two (2) days of our services at no cost to assist in evaluating a client's needs.
- Minimal time required with your busy staff simply by leveraging our highly skilled functional consultants, technical experts and best practices.
- Significant dollar savings realized through improved availability of systems, information and people, or by reduction in hardware, software and license costs.
- Enhance your competitive position as a company, and ease expansion into new markets and geographies.
- Delivery of actual and desired results consistently on-time and on-budget.

Disaster Recovery & Business Continuity

Compliance

Financial & Technology

Regulations and guidelines like Sarbanes Oxley (SOX) can be costly to an organization, but software providers are incorporating automated features to better manage risk, audit compliance, and minimize overall cost. Infotegrity analyzes current financial systems, business processes and consolidation/reporting requirements for SOX and SAS 70 compliance as well as improved methods and tools. Aligning and integrating key technical and functional components within the Oracle E-Business environment (i.e. self-service modules) further reduces cost and risk to the organization and its shareholders.

Security, License & Support

Infotegrity leverages tools and techniques to quickly assess security, accumulate license and support data and make recommendations for tighter control, cost savings and service level improvements. New features such as Oracle's single sign-on are recommended for clients using the Oracle E-business Suite, beginning with Release 11.5.8. Single sign-on works within multiple frameworks, is LDAP compliant and ensures secure access and a more productive work environment.

Performance

Budgets, Business Intelligence, Consolidation, Datawarehouse & Reporting

Infotegrity partners with Oracle and others to expedite and improve budget, business intelligence, consolidation, datawarehouse and reporting processes within an organization. Many options exist for gathering, assembling and disseminating information, however, properly architecting and deploying these complex solutions requires high level understanding and expertise.

Oracle's strength in financial performance management (FPM) and enterprise performance management (EPM) software was recently upgraded with "OBIEE Plus" – a prime example of strategic advantage following recent acquisitions and product integration. OBIEE Plus (Oracle Business Intelligence - Extended Edition) bundles Oracle's largely Siebel-based BI suite with specific Hyperion System 9 Essbase BI tools, and incorporates Interactive Reporting, SQR Production Reporting, Financial Reporting and Web Analysis.

Integrated Supply Chain

Organizations face unprecedented challenges in meeting demands such as time to market, order to cash, etc. Satisfying customer requirements today dictates the highest levels of responsiveness, accuracy and quality. Leveraging new features, functionality and process flows within Oracle's Release/11i and Realease/12 provides unparalleled advantages and near turn-key solution sets for virtually any business. Our proven professionals, best practices and 360 degree management of Supply Chain initiatives facilitate your success: from initial strategy and solution assessment to implementation, upgrade, enhancement and on-going support.

Capacity, Instance Management & Back Up/Recovery

Management of mission critical systems and information does not always require expensive hardware or software. Rather, a well defined capacity, instance management and back up/recovery plan to help resolve contention and concerns as well as relieve budgets. Infotegrity helps assess an organization's strategic and tactical plans and further assists by monitoring and managing support of these systems on a 7x24 hour basis.

Continuity

Disaster Recovery & Business Continuity

Integral to the success of any company today is its ability, or agility, to respond in the event of a catastrophe. Infotegrity examines the strategy and tactics in place to support the on-going business, but also applies technical expertise to incorporate future products and methods. Upgrading to products like Oracle's 10g or 11g database within the next budget cycle will positively impact DR/BC operations and budgets due to highly automated, advanced capabilities.
